What did you expect from PSSD?

66 risposte

I didn't have a clear idea of what it was about. The only thing I was expecting was an international an open mood

Open minded approach to life

To be able to understand and be able to implement the methodology, process and tools in a deep and real way

I expected an international-oriented education in Design with a strategical perspective

to be able to manage service complexity

Learning about designing services

I didn't know what to expect because I didn't get anything at the moment of the application...I was attracted by the multicultural aspect and by something else I can't explain

To enlarge my design horizons

Better investigation and reading

Open mindeness, networking, 360° design approach

A more complex way of thinking

Something different from what I knew before

What did PSSD teach you?

70 risposte

Service Design (2)

Get used to different cultures and way of thinking

Teamwork, understand others and be patient, organize and be responsible with tasks, a lot of presentation and speaking workout to present, have a better understanding of service design and introduction to some of the tools used to apply it

PSSD taught me what does it mean "service" and how to design it

having a strategic approach and having a good view / awareness about the overall service project

A lot in general, but few regarding what is required by the companies and real world projects

What is a service, lots of case studies, working in team, service design tools, a bit of prototyping...

To be a citizen of the world

Open my mind and search on my own

Expect the unexpected, empathy, methodology

A more complete way of design

What did PSSD missed in teaching you ?

63 risposte

User research!!!!!!!!!!!!

Business economy and marketing

Deeper understanding of tools, in a theoretical and deep implementation way, to be masters of service and the tools, also to use any of these popular wreframing and ux prgrams that Companies ask to know like balsamiq, axure, etc

A complete understanding of the general path of the course. I didn't find any logic consequence of the courses. I would have liked to have more experiences/briefs with real companies/agencies

services as part of an ecosystem you have to deal with. no skills toward services implementation, just good ideas & good presentations.

Great in teaching social and community service projects, it misses business service cases, which are the most required by real service design companies

More about the methodology, practical things, storytelling, marketing basics, more prototyping

Service design and design thinking methodologies

Theoretical part

More design doing. Lots of great lectures but few project in important disciplines like IIX or III. I think that Deed

Positive and negative points of PSSD

62 risposte

Positive (2)

Negative: lack of a clear process in doing the user research. Positive: good contacts with companies and universities, very good people (many of them are still good friends), positive spirit, kind of free structure, international touch

Positive : internationality; negative : free business approach

Positive: gaining overall understanding and clarifying what service and pssd is, introduction to the processes...negative: too many team projects (in the job, you could be alone working) , not enough and deep understanding of the tools, the need to try and make at least a feasible real project that could be implemented in the real world maybe within a company, having to work 2 years in teams and then a thesis alone (its hard to change)

POSITIVE: international, good professors, good labs. NEGATIVE: no logic explanation of the path at the beginning, innovation studio is completely out of scope (they teach product design)

services as part of an ecosystem you have to deal with. no skills toward services implementation, just good ideas & good presentations.

Positive: Great for understanding how to work in a team. Negative: see above

I enjoyed PSSD, positive points are the multicultural environment and the chance to deal with a variety of projects but actually I realized that we learnt a lot between us, doing things, and not from the professors. When I

Do people in your job know what PSSD is?

82 response

What is the perception of PSSD in the job world?

64 response

A strange place where people are trained to become extremely flexible. The negative part is that this flexibility brings a pssd student to be skilled in moderating working groups, so sometimes students are confused with coaches for companies

Perfect for whom want to work in UX field

They think its or UX or UI or digital transformation (creating or an app or a platform)

Most of the people don't know what it is, but they heard of service design and are attracted by it. So, as soon as you explain to them what you do, they are immediately attracted

"i should know so i don't ask what it is. but i confuse it with graphic / ux / good presentation / smart thinking / post its"

Most of the people working as service designers comes from pssd, so it reflects how they perceive these people.

Now the role of service designer is getting "famous" so I think is seen as something new and attractive, really useful in putting the user at the centre

Something people find difficult to understand

Doesn't exist much

A bunch of communication design most of the time. Pssd is more...

How do you think the role of the PSS designer will change in the next future?

57 response

I hope service designers will step out of their bubble and become strong business partners for companies (both as employees or as consultants)

Guarantee a natural and easy approach to complicate things

I hope it will be more well know or at least clear in people and companies and it will continue to grow

Hard question. Probably now service design is at the highest peak of its glory. Everyone is talking about it as it was a trend. I think that somehow this will finish, I think that another process/methodology will arise and will be called in another way, but what service designers are doing will slightly change, not disruptively.

orchestrate & facilitate communication among company depts. & drive cultural change, for services implementation.
More and more integrated into decisional and strategic roles
I think PSS designers will have more and more space in the next future...i already noticed the difference in the last 2 years
Service design will be the new consultancy
We are the future
More business oriented

Thank you very much for helping me. If you want me to use your quotes, you can leave me your name here. Thanks!
